Bekasi, West Java

Software engineer and data enthusiast with a learn-by-doing mindset, working across TypeScript, Python, and SQL to build full-stack applications and data-driven solutions that solve real business problems. I like understanding a problem end-to-end before writing code, from data structure to system design to how it's actually used. Currently deepening my skills in agentic AI, scalable system design, and applied data science through hands-on projects, and always pushing to turn technical depth into things that actually work in production.

Educational Background

GUNADARMA UNIVERSITY | Bekasi, Indonesia

Bachelor degree in Informatics, 3.85/4.00

- Practical experience with programming languages: Python, Java (J2SE), PHP, Visual Basic, HTML/CSS/JavaScript
- Completed lab-based coursework in Web Programming, SQL, and Oracle Database
- Studied Database Systems and Database Management Systems (DBMS), focusing on data modeling, normalization, and SQL query optimization
- Applied software engineering principles in hands-on lab sessions and academic projects

Experience

IT INTERNSHIP

PT PELITA AIR SERVICE

- Contributed to the end-to-end development of the SparePart Monitoring application, transitioning a paper-based process into a digital system within the IT Solution team at PT Pelita Air Service.
- Developed internal web interfaces using Laravel Blade, translating Figma UI/UX designs into clean, responsive templates.
- Built CRUD functionality to support core application workflows, from data structuring to page implementation.
- Collaborated with the development team using Git for version control and branching, and Jira for task tracking and sprint workflows.
- Gained hands-on exposure to the full software development lifecycle, from requirement gathering to frontend implementation, building a practical understanding of how business logic drives system design.

Projects

- **DeteksiSIBI** - Built DeteksiSIBI, a full-stack real-time SIBI sign language detection system, training a YOLOv8 model (98.34% precision, 98.62% recall, mAP50 98.23%) and deploying it via a FastAPI + PostgreSQL backend with a React.js frontend for real-time webcam-based detection.
- **Tomato Leaf Diseases** - Built TomatoLeafDiseases, an end-to-end tomato disease classification system using transfer learning with MobileNetV2 (90.5% accuracy), managing the full pipeline from data preprocessing and augmentation to deploying an interactive Streamlit web app for instant diagnosis.
- **Sparepart Monitoring** - Worked as Frontend Developer intern on Sparepart Monitoring, an internal PHP/Laravel/MySQL web app for tracking spare part inventory across departments, building responsive UI layouts and integrating backend APIs for real-time stock data.
- **Bank Lead Intelligence Portal** - Contributed as frontend developer on BLIP, a MERN-based internal sales platform delivering AI-driven customer recommendations, building and improving the UI, refactoring backend integration with FastAPI-based AI services, and helping shape the overall tech stack and architecture.
- **Rizquna Bakery** - Built Rizquna Bakery, a full-stack MERN bakery ordering platform as a final project, handling everything end-to-end from product management and auth to shopping cart, Midtrans payment integration, and an admin dashboard for order and delivery tracking.

Certifications

- DATA ANALYSIS: FULLSTACK INTENSIVE BOOTCAMP
- IT INTERNSHIP
- REACT & BACKEND WITH AI

Skills

Hard Skills: JavaScript, TypeScript, PHP, Python, NodeJs, ExpressJs, Laravel, FastAPI, HTML, CSS, ReactJs, NextJs, Tailwindcss, Bootstrap, Sass, MongoDB, MySQL, PostgreSQL, Prisma, Git, Github, Postman, ESLint, Bash, Docker, Figma, Data Studio

Soft Skills: Problem Solving, Teamwork, Communication, Critical Thinking, Self-Learning, Adaptability, Time Management

Languages: Indonesia , English
