SUMMARY

BNSP-certified Associate Data Engineer and Informatics graduate (GPA 3.85). At Mahkamah Konstitusi, I built a pipeline that indexed ~1,000 pages into a PostgreSQL (pgvector) schema I designed, plus an API that serves HR data without exposing the production database. Works with Python, SQL, PostgreSQL, and Docker.

EXPERIENCE

Software Engineer Intern | Mahkamah Konstitusi RI (National Internship Program) Sep 2026 – Present

- **Ingestion pipeline:** Built a CLI pipeline (PDF parsing, chunking, embedding) that indexed ~1,000 pages of HR documents into a PostgreSQL pgvector schema I designed, powering a RAG chatbot for SIMPONI, MK's in-house HR system used by the HR bureau (SDMO).
- **Data API:** Built a Prado (PHP) API that serves SIMPONI employee data to downstream consumers, so the LLM layer never queries the production database directly.
- **Grading AI:** Built solo a batch system that scores ~200 essays per run with Qwen into draft scores for an overloaded grading team to review (FastAPI, PostgreSQL, Pgvector, Redis, Docker; in staging).

Frontend Engineer Intern | PT Pelita Air Service Nov 2025 – Jan 2026

- Built core pages of SparePart Monitoring, a now-live web app that moved spare part records from paper to a shared database for 5 departments across the Depok site and Jakarta office (Laravel, Git, Jira).

PROJECTS

Hospital Database Design | BNSP Associate Data Engineer Assessment Jul 2026

- Designed a relational database for a hospital case study (RS Afiat): modeled the ERD, defined data types and constraints, then created and populated the tables in SQL.

Tokopaedi | E-Commerce Data Analysis (MySkill Final Project, 7-person team) Aug 2026 – Sep 2026

- Wrote SQL across 6 related tables (customers, products, orders, payments, transactions, funnel) for monthly sales, same-month YoY channel growth, and organic funnel conversion; built a Looker Studio dashboard tracking Rp8.69B sales, Rp2.01B net profit, and Rp1.51M AOV.
- Using Python (pandas), found that weekend campaign days averaged 29.93% lower daily sales than weekdays (Oct–Dec 2022), recommended shifting promo budget to weekdays, and identified 820 checked-out but unpaid customers for re-targeting.

DeteksiSIBI | Real-Time Sign Language Detection (Thesis) May 2026 – Jul 2026

- Trained YOLOv8 on a 3,000+ image Kaggle dataset (26 classes, augmented) to 98.34% precision, 98.62% recall, 98.23% mAP50; served at ~60 ms per frame via FastAPI, PostgreSQL, and React.

Tomato Leaf Disease Classifier Mar 2026 – Apr 2026

- Built a MobileNetV2 transfer learning classifier (90.5% accuracy) with augmentation, deployed on Streamlit.

Bank Lead Intelligence Portal (BLIP) | Asah by Dicoding × Accenture Capstone Oct 2025 – Dec 2025

- Led a 5-person team building a sales platform that scores how likely a bank customer is to take a credit product.

EDUCATION

Gunadarma University | Bachelor of Informatics Sep 2022 – Aug 2026
GPA 3.85 / 4.00 | Thesis: web-based SIBI sign language detection with YOLOv8 (CRISP-DM)

SKILLS

Languages: Python, SQL, TypeScript, JavaScript, PHP
Databases: PostgreSQL, MySQL, MongoDB, Redis, pgvector, data modeling (ERD, schema design)
Data & Analytics: pandas, NumPy, Matplotlib, Seaborn, Looker Studio, document ingestion (chunking, embedding)
AI/ML: RAG, Qwen, YOLOv8, MobileNetV2 (transfer learning), Streamlit
Backend & Tools: FastAPI, Laravel, Prado, Node.js, Next.js, Docker, Git, GitHub, Postman, Jira, Bash
Spoken: Indonesian (native), English (professional)

CERTIFICATIONS

- **Associate Data Engineer**, Badan Nasional Sertifikasi Profesi / BNSP (Jul 2026)
- **Data Analysis Fullstack Intensive Bootcamp** + Certificate of Mastery, MySkill (Jul–Sep 2026)
- **React & Back-End with AI**, Asah by Dicoding × Accenture (Jan 2026)
