SUMMARY

Software engineer (Informatics, GPA 3.85) who builds AI-powered web applications end to end. At Mahkamah Konstitusi, I solo-built an LLM essay pre-grading system and a RAG chatbot for the internal HR system, from database schema to deployment with Docker. Works across TypeScript (Next.js, React), Python (FastAPI), PHP (Laravel), and PostgreSQL.

EXPERIENCE

Software Engineer Intern | Mahkamah Konstitusi RI (National Internship Program) Sep 2026 – Present

- **Grading AI:** Built solo, end to end, an essay pre-grading system for Pusdik MK's e-learning platform that batch-scores ~200 essays per run with Qwen, giving an overloaded grading team draft scores to review instead of grading from scratch (Next.js, FastAPI, PostgreSQL, Pgvector, Redis, Docker; in staging).
- **SIMPONI Chatbot:** Developed a RAG chatbot for SIMPONI, MK's in-house HR system used by the HR bureau (SDMO), so HR staff can query employee data and HR documents in natural language; built a CLI ingestion pipeline (PDF parsing, chunking, embedding) that indexed ~1,000 pages into a pgvector schema I designed.
- **Data API:** Built a Prado (PHP) API that serves SIMPONI employee data to the chatbot, so the LLM layer never touches the production database directly.

Frontend Engineer Intern | PT Pelita Air Service Nov 2025 – Jan 2026

- Built core pages (login, signup, home, inventory, settings) of SparePart Monitoring, a now-live web app that replaced paper-based spare part records for 5 departments across the Tanggerang site and Jakarta office.
- Translated Figma designs into Laravel Blade views wired to backend endpoints as one of 3 frontend developers, working in Jira sprints with Git branching.

PROJECTS

DeteksiSIBI | Real-Time Sign Language Detection (Thesis) May 2026 – Jul 2026

- Built a full-stack web app that detects all 26 SIBI alphabet signs from a webcam: trained YOLOv8 on a 3,000+ image Kaggle dataset, augmented (98.34% precision, 98.62% recall, 98.23% mAP50) and served it at ~60 ms inference per frame via FastAPI, PostgreSQL, and a React frontend.

Bank Lead Intelligence Portal (BLIP) | Asah by Dicoding × Accenture Capstone Oct 2025 – Dec 2025

- Led a 5-person team and built the React frontend of a MERN sales platform that scores how likely a bank customer is to take a credit product; refactored the integration with FastAPI-based ML services and drove tech stack decisions.

Tomato Leaf Disease Classifier Mar 2026 – Apr 2026

- Built a tomato disease classifier with MobileNetV2 transfer learning (90.5% accuracy), covering preprocessing, augmentation, and deployment as an interactive Streamlit app.

Rizquna Bakery | Full-Stack Ordering Platform (Personal Project) Mar 2025 – Aug 2025

- Built a MERN ordering platform with authentication, cart, Midtrans payment integration, and an admin dashboard for order and delivery tracking.

EDUCATION

Gunadarma University | Bachelor of Informatics Sep 2022 – Aug 2026

GPA 3.85 / 4.00 | Thesis: web-based SIBI sign language detection with YOLOv8 (CRISP-DM)

SKILLS

Languages: TypeScript, JavaScript, Python, PHP, SQL
Frontend: React.js, Next.js, Tailwind CSS, Bootstrap, Sass, HTML/CSS, Figma
Backend: FastAPI, Node.js, Express.js, Laravel, Prado, REST APIs
AI/ML & Data: LLM integration (Qwen), RAG, embeddings, pgvector, YOLOv8, MobileNetV2, Streamlit, pandas
Data & DevOps: PostgreSQL, MySQL, MongoDB, Redis, Prisma, Docker, Git, GitHub, Postman, Jira, Bash
Spoken: Indonesian (native), English (professional)

CERTIFICATIONS

- **React & Back-End with AI**, Asah by Dicoding × Accenture (Jan 2026)
- **Associate Data Engineer**, Badan Nasional Sertifikasi Profesi / BNSP (Jul 2026)
- **Data Analysis Fullstack Intensive Bootcamp** + Final Project Mentoring (Certificate of Mastery), MySkill (Jul–Sep 2026)
